Lumache (/lu'make/) is a Python library for cooks and food lovers that creates recipes mixing random ingredients. It pulls data from the [Open Food Facts database](#) and offers a *simple* and *intuitive* API.

Check out the [Usage](#) section for further information, including how to [Installation](#) the project.

Note: This project is under active development.

CONTENTS

1.1 Usage

1.1.1 Installation

To use Lumache, first install it using pip:

```
(.venv) $ pip install lumache
```

1.1.2 Creating recipes

To retrieve a list of random ingredients, you can use the `lumache.get_random_ingredients()` function:

`lumache.get_random_ingredients(kind=None)`

Return a list of random ingredients as strings.

Parameters `kind` (`list[str]` or `None`) – Optional “kind” of ingredients.

Raises `lumache.InvalidKindError` – If the kind is invalid.

Returns The ingredients list.

Return type `list[str]`

The `kind` parameter should be either `"meat"`, `"fish"`, or `"veggies"`. Otherwise, `lumache.get_random_ingredients()` will raise an exception.

exception `lumache.InvalidKindError`

Raised if the kind is invalid.

For example:

```
>>> import lumache
>>> lumache.get_random_ingredients()
['shells', 'gorgonzola', 'parsley']
```

1.2 API

lumache

Lumache - Python library for cooks and food lovers.

1.2.1 lumache

Lumache - Python library for cooks and food lovers.

Functions

get_random_ingredients([kind])

Return a list of random ingredients as strings.

Exceptions

InvalidKindError

Raised if the kind is invalid.

1.3 classes

your package's description here

1.4 Installation

Install with pip

```
pip install your_package_name
```

1.5 API

class `classes.Line(x1, y1, x2, y2)`

This is a line representation

class `classes.Point(x, y)`

This is a point representation

1.6 Authors

Fezzik

Lumache has its documentation hosted on Read the Docs. Fezzik agrees that there are rocks ahead.
